

## SAGE PASTEL STOCK TAKE *made easy*

**Stock-take is probably the worst time of the month for any organization carrying a large variety of inventory items. The tedious process of printing count sheets, tallying up items and recapturing the quantities into Sage Pastel is time consuming and open to many potential data capture and human errors.**

- **fenyaWMM** downloads all the Sage Pastel stock data onto the barcode scanner
- Staff then capture on-hand quantities electronically by scanning the product barcode
- On completion the stock count is extracted from the scanner and posted to Sage Pastel
- Variances are checked and the stock count is processed in Sage Pastel in the normal way

### Key features

- Count stock electronically using the product barcode
- Multiple warehouses/stores supported
- Scan items individually or scan and enter the quantity
- Scan the items, enter the weight and the scanner calculates the quantity
- The scanner caters for pack/selling unit barcodes.
- Scan the pack barcode and it will calculate the quantity

### Benefits

- All inventory and store data is present on the scanner
- No paperwork, no manual picking sheets, no double capture
- Count stock in any sequence at any location
- Count and recount as many times as required

### Eliminates

- Counting errors
- Double capturing
- Human errors

### Sage Pastel Version Support

- Evolution
- Partner/xPress
