

fenyaDeliveries

Delivery Solutions for Pastel Accounting

fenyaDeliveries is a simple to use but extremely useful tool for companies that use telesales to make deliveries (on a daily basis for FMCG) to customers.

Traditionally telesales people receive orders and either pass them on or capture them into Pastel Accounting. At a cut-off point these orders are manually grouped into routes, the stock picked and packed and the goods delivered. The entire process is tedious and time consuming which has to be repeated the next day.

fenyaDeliveries automates this process by grouping invoices (by rep, ship or user defined field) into routes, prints picking slips with totals, produces a driver delivery schedule with customer totals, cash totals, account totals and the like. In addition, buy-back scheduled can be produced for goods that have passed sell-by-date and so on.

Cool Features

- Auto Generate
 - Picking Slips
 - Delivery Schedules
 - Buy Back Reports
- Simple and easy to use
